

Captovation® Capture Commit Driver for

Wisteria IT has developed a Commit Driver for the Captovation Capture v5.x suite. The Commit Driver enables customers to scan, index and archive documents with Captovation software and commit them directly into Open Text's Livelink Document Management System.

The Captovation® Commit Driver for Livelink is an API level integration that provides direct document archiving between Captovation Capture and Livelink.

COMMIT DOCUMENTS DIRECTLY INTO LIVELINK

The Commit Driver for Livelink can be used across the entire Captovation Capture suite of products. It has the ability to:

- Add a document to the Livelink repository immediately after it is scanned and indexed with Captovation Capture
- Use the Captovation Commit Server to schedule the document commit into Livelink

Livelink transactions may be configured for the document commit process:

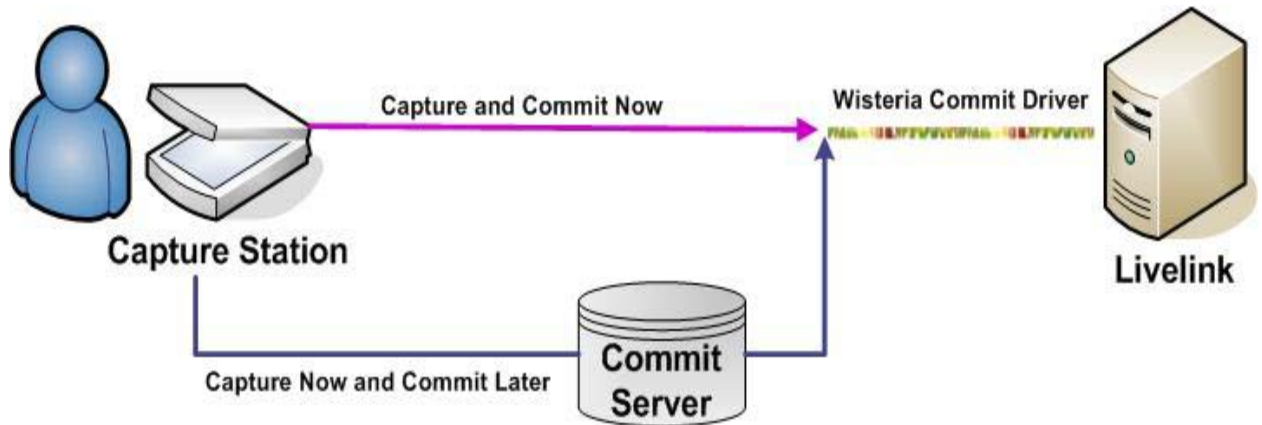

- Add documents to specified Livelink folders
- Add documents to Livelink folders based on index data values
- Initiate a Livelink workflow and add document attachments

PERFORM ADMINISTRATION TASKS

The Commit Driver for Livelink provides an administration interface to configure the following:

- Map Captovation index data fields to Livelink category/attributes
- Select specific Livelink folders
- Select Livelink folders based on index data values
- Select Livelink workflow to be initiated

CAPTOVATION CAPTURE AND COMMIT TO LIVELINK

OTHER WISTERIA IT MODULES FOR LIVELINK

LiveID
